

# Domain

Domain is a modular system designed for rapid change. Highly flexible, Domain addresses the diverse styles of today's multigenerational workforce and can be easily adjusted as needed. A wide range of accessories, storage, power access, work tools and privacy enhancements enable personalization.

## Material

Melamine board with particle board core.

Material thicknesses: Functional shelf 1". Case boxes 1/2" (front 3/4").

## Connections

Domain modules consist of combinations of the functional shelves, boxes, worksurfaces and accessories. The functional shelf has a centrally placed rail made of anodized aluminum. The functional rail is used to fix the boxes, accessories and plinth elements in place. The boxes are equipped with specially developed centered connection fittings.

12", 15", 18" wide boxes: 2 connection fittings: 1 x top, 1 x bottom.

24", 30" wide boxes: 4 connection fittings: 2 x top, 2 x bottom.

The connection fitting consists of a guide sleeve and a clamping pin. The Domain key or a 6 mm Allen key is required to attach the boxes to the functional shelves. With a quarter turn, the box is attached to the function rails.

The boxes can be attached either facing front or facing back, as they are reversible. Depending on the arrangement and composition of the boxes, open compartments become a design element.

## Positioning

The lowest functional shelf must be fitted with support feet that match the width of the functional shelf. The steel support feet are fixed to the functional shelf and have tool-free adjustment modules to compensate for uneven floors.

## Linking

To create longer configurations, the functional shelves are linearly linked by a linking set consisting of linking caps. Screen inserts cannot be used in places where there is a slot nut.

## Product features

---

### Box as a shelf element

The shelf element is available as a box in widths of 12", 15", 18", 24" and 30".

## Box with 2 drawers

The box with drawers is available in widths of 15", 18", 24" and 30". The steel drawers are painted in Eco Black and are equipped with full extension telescopic slides. A standard counterweight ensures stability.

Functional load:

Box 30" wide: 44 lbs functional load.

Box 15" wide: 22 lbs functional load.

The drawers have a continuous handle strip made of anodized aluminum. The boxes are optionally available with a lock. Only the top drawer is lockable on box units with 2 drawers.

## Box for filing

Pullout drawers and shelves are standard with one pair of hang file bars for side-to-side suspended filing. Optional accessories available. A standard counterweight ensures stability.

## Accessories

---

### Glass Screen - Top

Screens are available for the top functional shelf and are attached by an aluminum mounting clamp inserted into the functional rail by a mechanical connection. Mounting clamps are included in delivery as standard.

### Glass Screen - Insert

Glass screens are available in widths of 12", 15", 18", 24" and 30" for use in the open compartments. Inserts are mounted between the functional rails. Plastic holders are inserted in the functional rails at the top and bottom and are included in delivery as standard. Screen inserts can't be used in places where there is a slot nut.

In addition to clear screens, translucent glass screens with applications as decorative inserts are available in the following designs: Clear Glass, Etch 1 Side, Etch 2 Sides, Grey (Smoked) Glass.

### Cushion Top

The cushion tops consist of 2 layers of 5 mm thick felt and a foam filling. The lower layer in Graphite Grey has a non-slip coating.

### Production

Lead Time: 4-6 Weeks

Manufactured in North America.
